 Oracle JD Edwards

PRECISION Products

Transportation Management
 Parcel Shipping
 Global Trade Management
 Global Visibility

Key Benefits:

Flexible and scalable integration
 Superior ownership experience
 Lower TCO
 Integrated platform to meet complex business requirements

Precision Software provides highly integrated parcel shipping solution to Oracle customers

Partner Overview

Established in 1984, Precision Software provides industry leading transportation and global trade management software for businesses around the world. The PRECISION suite of products is designed with open architecture and integrates with leading enterprise resource planning, warehouse management systems and legacy applications to reduce transportation costs, avoid delays at trans-border crossings and mitigate the risks associated with dynamic trading environments.

Integration Solution Overview

Customers using both Oracle and PRECISION span multiple industries. With rapid improvements in technology, customers not only expect quick and seamless integrations, but tightly managed implementation costs and responsive customer support. Integration of PRECISION with the Oracle Applications allows customers to realize these expectations. PRECISION's API's and Service Oriented Architecture (SOA) based integration to Oracle Transportation Management (OTM) ensure that synchronous transactions occur between the applications. Oracle customers need only to train their users in one application while leveraging the value-driven functionality of the tightly-coupled PRECISION Parcel Shipping application in the background. They benefit from end-to-end visibility and centralized control of their multi-modal (parcel, LTL, TL, Rail, Ocean & Air) transportation requirements and compliance with global trade regulations.

Flexible Integration

Customers who use Oracle Applications and PRECISION mandate comprehensive architectural solutions to meet their domestic and international business needs now and in the future. As global business requirements and markets change, the ability to maintain a flexible and scalable solution set can mean rapid organizational adaptability as well as a competitive advantage. Oracle OTM application and Oracle BPEL Process Manager combined with PRECISION provides a seamless and supple integration using SOA technologies. Built on industry standards, Oracle BPEL Process Manager, as part of Oracle Fusion Middleware, orchestrates business processes and enables 'real-time' and flexible integration between the Oracle Applications and PRECISION to effectively and efficiently meet the customer's business, IT and transportation needs on a global basis.

“Our joint customers realize the value and power of Oracle and PRECISION working together. They leverage the tightly integrated solutions to move billions of dollars worth of products to their end customers on a daily basis. The single user interface and certified points of connectivity to carriers ensures that they meet customer demands with on-time delivery and ‘real time’ visibility across the supply chain.”

**Ed Boclair, President,
Precision Software**

Why Oracle?

Precision Software has many years of experience working with industry-leading Oracle Applications and recognizes the importance of providing a well-integrated and easily deployed solution for Oracle’s customers. As an independent software vendor, Precision Software provides a configurable and flexible option for Oracle’s customers to leverage in the constantly shifting transportation and global trade landscape. By using Oracle Fusion Middleware as the integration platform, Precision Software is able to provide a reliable, flexible, scalable, secure and cost effective integration to its customers.

Essential Benefits

The PRECISION solution provides:

- A comprehensive multi-carrier manifesting application integrated with the Oracle Applications to support small parcel, less-than-truckload (LTL), Truckload (TL), Ocean, Intermodal and multi-leg rating
- Rapid shipment processing for high volume shipping environments
- Carrier compliant label generation and end-of-day manifesting utilizing PRECISION’s global carrier certifications (more than 40 worldwide).
- Seamless integration using Oracle Fusion Middleware and PRECISION native tool set to reduce the implementation timeline and manage costs.

The simple yet effective integration of PRECISION and Oracle removes the need for users to interact with or ‘learn’ multiple applications, reducing training needs and increasing their day-to-day efficiencies.
